albor advisory

TRAINING PROGRAM

Thinking *critically* with AI

Your teams' AI drafts are mostly right. This program teaches them to find the part that isn't, fix it and check only as much as the stakes require.

FORMAT

50 minutes on demand, then a 3-hour workshop.

FOR

Anyone who uses AI at work. No technical background needed.

DELIVERY

Run by Albor, or by your own trainers after Albor trains them.

01 · WHY IT MATTERS

AI is mostly right. The risk is the part that *isn't*.

Your teams already use AI tools such as Microsoft 365 Copilot, ChatGPT or your own company assistant. Most of what these tools produce is right, so the wrong part is easy to miss. And it can be the part a customer or a manager acts on.

Six ways AI output goes wrong in real work

A condition is dropped
"Subject to factory confirmation" disappears from a lead time.

"Maybe" becomes "yes"
"I will ask Pricing" becomes "I will send a lower price."

Right arithmetic, wrong starting figure
A saving worked out for the whole site, when the audit covered only one production hall.

An old version
The answer quotes last year's manual, not the current one.

A gap filled with something that sounds right
A duration, a cause or words a customer never said.

It only knows what it was given
A correct analysis of the file, but the decision depends on facts that were never in it.

The opposite mistake costs time too

Checking a to-do list as carefully as a price quote wastes the time AI saved. So does giving up on a tool that does good work. The program teaches people to check in proportion to the stakes, so they can use AI more, not less.

WHY NOW

Under the EU AI Act, organizations that use AI must take measures that support their staff's AI literacy. Where the Act applies to you, this program can be one of those measures.

Source: Regulation (EU) 2024/1689, Article 4, as amended by Regulation (EU) 2026/1744.

02 · HOW THE PROGRAM WORKS

One method, practiced on *everyday* work

Participants learn one habit, CHECK, in six short modules. Then they practice it in the workshop, in groups of 12 to 20, on realistic cases from their kind of work.

C
Consequence
What happens if this is wrong? Choose the tier.

H
Hunt the claims
List every fact, number, date and promise.

E
Evidence
Check what matters against the source of record.

C
Challenge
What is missing, added or one-sided?

K
Keep ownership
Would I sign it as my own work?

Check more when more is at stake

Low
Notes and drafts only you will see. One read is enough.

Medium
Internal summaries. Check names, dates, decisions and numbers.

High
Customer emails, price quotes, figures for leaders. Check every claim and recalculate.

Critical
Safety, contract terms, compliance claims, decisions about people. A qualified person signs off.

PART A · ON DEMAND

Six modules, 50 minutes

Starting quiz	5 min
Mostly right still needs a check	10 min
Your own thinking traps	7 min
The CHECK method	12 min
Verification toolkit	10 min
Responsible use of AI	6 min

Self-paced, in the week before the workshop.

PART B · WORKSHOP

Six exercises, 3 hours

Would you send it?	15 min
CHECK recap and stakes sort	20 min
Case review: find and fix	45 min
Live verification lab	40 min
Challenge the recommendation	35 min
Commit and close	15 min

Teams of 3 or 4, with a 10-minute break.

03 · WHAT YOU GET

Designed so people use AI more, and *better*

Exercises that look like real AI output

Mostly right, with the slips today's tools make: a dropped condition, an unapproved promise, an old version.

One case with no problems at all

Teams learn not to invent problems either. When the evidence shows none, the right decision is to use the output.

Your tools and your work

Cases for sales, service, finance, supply chain, HR and marketing, practiced on the AI tools your people already use.

Ends with a task to check less

Each person picks one task to check more carefully and one where a single read is enough.

Everything needed to run it, ready to use

- Trainer guide with every answer key
- Participant workbook
- Scripts for the six on-demand modules
- A one-page source document for the lab
- Workshop slides with speaker notes
- Job aids: CHECK card, tiers and prompts
- Quizzes, scoring rubric and survey
- 30-day follow-up messages and a CHECK log

Two ways to buy: license it or have Albor run it

LICENSE

Your trainers run it

Albor tailors the cases, trains your trainers and can deliver the pilot. You get every material above.

TRAINING

Albor runs it

Albor tailors the cases and delivers the workshops, from a pilot group to a full rollout.

Next step: a scoping call

We look at the AI tools your teams use and the work they do, and show how the cases would be tailored to you.
